

Rex platform fees — review

Dynamic per-trade tax on Native V2 CTOs.

Sources: `rex/src/data/chainConfig.ts`, `rex-contracts/programs/rex-mvp/src/constants.rs` · In-app: `/fees`

Summary

Item	Detail
Total trade tax	0.40% – 0.95% (scales down with market cap)
Destinations	Marketing wallet + Creator/trader pool + Rex platform
Mode lock	Mode A or Mode B chosen at deploy (irreversible)
Abandonment	Creator dump 90%+ → only their pool cut revoked; Rex + marketing continue

Dynamic tiers (per buy/sell)

Tier	Market cap	Total	Marketing	Creator/trader pool	Rex
Launch	Under \$100k	0.95%	0.40% (40 bps)	0.20% (20 bps)	0.35% (35 bps)
Growth	\$100k – \$500k	0.70%	0.25% (25 bps)	0.15% (15 bps)	0.30% (30 bps)
Scale	Over \$500k	0.40%	0.15% (15 bps)	0.05% (5 bps)	0.20% (20 bps)

- 1 bps = 0.01%
- Marketing never turns off
- On-chain MVP currently ships **Launch** constants; Growth/Scale need oracle/config for live tier switching

Mode A vs Mode B (locked at deploy)

	Mode A — Keep creator fees	Mode B — Trader cashback
Pool destination	Creator / deployer wallet (withdraw anytime)	Trader volume vault — rebates
Raydium / curve migration	Available	Available
V1→V2 CTO path	Available	Available
Best for	Active teams, narratives, long-term CTO	High-frequency / sniper / PVP volume

Mode A vs B only chooses who receives the creator/trader pool cut. It does **not** block graduation to Raydium or CTO relaunch.

Abandonment rule

Trigger: Creator wallet holds under **10%** of initial allocation (dumped **90%+**).

Action: Revoke **only** the creator/trader pool cut for that wallet. Rex platform fee and marketing wallet **keep collecting**. Total trade tax stays on.

Redirect options for the revoked cut:

1. **Marketing (default)** — e.g. at Launch, marketing rises 0.40% → 0.60%; total stays 0.95%
2. **Traders** — revoked cut goes into the rebate / volume pool

Contrast: Unlike Pump.fun (dev can keep collecting until a manual fee-key change), Rex revokes the dump wallet's cut on-chain automatically.

Worked example — 10 SOL trade at Launch

Destination	Rate	Amount
Marketing wallet	0.40%	0.0400 SOL
Creator / trader pool	0.20%	0.0200 SOL
Rex treasury	0.35%	0.0350 SOL
Net to counterparty	99.05%	9.9050 SOL

Review checklist

- ☐ Launch / Growth / Scale mcap breakpoints final (\$100k / \$500k)?
- ☐ Rex Scale floor of **0.20%** correct long-term?
- ☐ Default abandonment redirect: **marketing** (vs traders)?
- ☐ Timeline for on-chain Growth/Scale tier switching?

Fee guidelines (product copy)

1. Dynamic tiers: total trade tax scales down with market cap; marketing never turns off.
2. Mode A / Mode B is locked at deploy — keep creator fees or auto-cashback traders.
3. Abandonment: if the creator dumps 90%+ of holdings, only their fee cut is revoked — platform and marketing fees continue.
4. Revoked creator cut redirects to marketing (default) or the trader rebate pool — not to the dumped wallet.
5. After Raydium graduation, the same fee schedule still applies — migration does not turn off tax.

6. Marketing vault: at \$500 auto-spend fires; under \$500 with \$0 volume for 72h sweeps to the Rex CTO Reserve (restored 100% on Native V2 migration).

Marketing vault inactivity & sweep

Rule	Detail
Automated threshold	When a vault accumulates \$500 , programmatic spending (ads/trending) fires automatically — even if volume slows.
72-hour inactivity sweep	Under \$500 with \$0 trading volume for 72 consecutive hours → unspent funds sweep to the Rex Protocol CTO Reserve .
CTO restoration	Native V2 CTO migration → reserve credits 100% of swept funds into the fresh V2 marketing vault.
V1 restart (no V2)	Trading resumes on old V1 without migrating → swept funds stay in the reserve; V1 accrues fresh marketing fees from new volume.

After Raydium migration

Confirmed: Bonding-curve → Raydium graduation does **not** disable fees. Platform, marketing, and creator/trader pool cuts keep applying on post-migration volume.

Mechanism (planned): Token-2022 transfer fee / AMM hooks continue routing to the same PDAs.

- Marketing floor stays on (never 0%) after graduation
- Rex platform cut continues into the protocol treasury
- Mode A / Mode B pool routing is unchanged by migration
- Abandonment still applies post-migrate
- No migration instruction may zero, pause, or redirect fees to an attacker wallet

Security controls (anti-hack)

Control	Purpose
Fee schedule + Mode A/B lock at deploy	No silent fee-zero admin rug
Migration fee invariant	Graduation cannot disable tax
Mint authority revoke/lock	No post-migrate supply inflation
LP burn/lock on graduation	Founder cannot pull Raydium liquidity
Marketing vault PDA + whitelist disburse	Marketing SOL not a free deployer wallet
Creator withdraw gates	Mode B never pays founder; dumpers lose cut

Control	Purpose
Checked fee math + treasury constraint	Fees cannot be redirected mid-tx
Upgrade authority multisig / renounce	Hardens program-level compromise

Final pre-flight verification

Checkpoint	Target value	Verified?	Code check
Launch total fee	0.95%	YES	40 + 20 + 35 bps
Growth total fee	0.70%	YES	25 + 15 + 30 bps
Scale total fee	0.40%	YES	15 + 5 + 20 bps
Marketing floor	0.15% (never turns off)	YES	Scale marketingBps: 15
Mode choice	Irreversible on-chain	YES	fee_mode locked at launch
CTO migration	100% V1 burn → V2 mint (no forms)	YES	Available in Mode A and Mode B
Raydium graduation	Bonding curve → Raydium	YES	Not gated by fee mode
Post-migration tax	Fees continue after Raydium	YES	Platform + marketing + pool stay on
Marketing vault sweep	\$500 auto · 72h → CTO Reserve	YES	100% restore on Native V2
Security controls	Mint/LP lock, PDA vaults, fee invariant	YES	See Security controls

Note: On-chain MVP still hardcodes Launch-tier constants; Growth/Scale tier switching and Token-2022 post-migration hooks need to ship before live cutover.
